Reviews

This sort of publication is everything and made me seeking forward and much more. Better than never, though i am quite late in start reading this one. I am easily could possibly get a delight of reading through a created pdf.

(Quinton Balistreri)

REMARKS ON ELEMENTARY EDUCATION IN SCIENCE: AN INTRODUCTORY LECTURE, DELIVERED AT THE OPENING OF THE CLASSES OF MATHEMATICS, PHYSICS, AND CHEMISTRY, IN THE UNIVERSITY OF LONDON, NOVEMBER 2, 1830 (CLASSIC REPRINT)

To get **Remarks on Elementary Education in Science: An Introductory Lecture, Delivered at the Opening of the Classes of Mathematics, Physics, and Chemistry, in the University of London, November 2, 1830 (Classic Reprint)** eBook, you should refer to the link below and download the file or have access to additional information which are related to **REMARKS ON ELEMENTARY EDUCATION IN SCIENCE: AN INTRODUCTORY LECTURE, DELIVERED AT THE OPENING OF THE CLASSES OF MATHEMATICS, PHYSICS, AND CHEMISTRY, IN THE UNIVERSITY OF LONDON, NOVEMBER 2, 1830 (CLASSIC REPRINT)** book.

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Remarks on Elementary Education in Science: An Introductory Lecture, Delivered at the Opening of the Classes of Mathematics, Physics, and Chemistry, in the University of London, November 2, 1830 They form part of the occupation of every child from the time when the development of its ideas commences. They are readily made; their results are easily remained; and so simple are the last in their nature, that it would have been thought childish to put them into words, had it not become necessary to embody them as the principles and groundwork of the mathematical sciences. The fact is that the terms observation and experiment are closely connected. The first is the faculty of the mind by which the second is experiments, whether they are derived by the senses alone, or by the assistance of the telescope or the thermometer. For Example, we learn to distinguish by the sight and touch that which we call a straight line. If any proof were necessary that our ideas on this subject are derived from observation alone, it would be found in the impossibility of defining this term. If any one were to ask me what is meant by the word, I could only answer by referring him to some visible object. By the evidence of our senses, and by no other means, we find that a straight line is such that two of this species can only coincide or meet in two points. The moment they are made to coincide or meet in one point. Again, suppose a straight line drawn and a point taken without it. Through this point let any other straight lines be drawn in...
